To: Son, A.A.C. van (Lieke) lieke.vanson@ru.nl

Hi Lieke,

I just got this email from our editor giving us some more guidance. I'm not sure if they sent this to you, too, so I'm passing it along just in case. One thing to notice is that we can use their art department for cartoons if we give them a good sketch! So we might want to think about that for our Figure 3.

I can do the logistical things like confirming deadlines, and I can send the synopsis to them after our next meeting!

Best,
Amanda

Dear Amanda,

Thank you for agreeing to write a perspective article for Nature Physics on population studies with gravitational waves. This piece will be part of a joint focus issue between Nature Physics and Nature Astronomy on gravitational waves that we plan to publish towards the end of next year. Please find the rough idea for the issue outlined in the attached file. In brief, the pieces would cover detectors, science and future challenges of the field.

The objective of a perspective article is to offer a survey on recent developments in a specific field while assuming a more forward-looking angle than a traditional review. As it is customary for Nature Physics, engagement and appeal to a broader audience are our primary concerns, more than an encyclopaedic coverage of the topic. Please find a collection of previously perspective articles at https://www.nature.com/nphys/articles?type=perspective.

Typically, perspectives are around 2,000-3,000 words long (excluding abstract, display items and their captions as well as references) with up to 50 references and 2-4 display items (figures, tables and boxes). Boxes, see https://www.nature.com/articles/s41567-019-0733-z for an example, can be used to discuss or highlight certain aspects in more detail. These numbers should be interpreted as guidelines rather than strict limits.

When writing the perspective article, please keep in mind that language should be simple, novel concepts defined and specialist terminology explained to make it accessible for a broad readership.

Please include any graphics ideas you may have for the piece — either as rough sketches or full-blown figures. We can ask our art department to work up your ideas, as long as the sketches are clear. If you would like to reproduce materials from a third party, our Editorial Assistant will help with securing the necessary rights.

Perspective articles are peer-reviewed, and we welcome suggestions (and exclusions) for reviewers. Please let me know as soon as possible and no later than upon submission should you wish to make use of our double-anonymous peer-review process. Otherwise, we will assume that you prefer single-anonymous peer-review.

Usually after peer-review, the text is (sometimes substantially) edited by us in consultation with you and your co-author. You can submit the perspective article as a PDF, Word or LaTeX document, and eventually we will discuss the edits with you by email. In certain cases, we might provide feedback on the structure of the article before sending it to reviewers.

As a next step, please prepare a synopsis that outlines your ideas for the structure and content of the article. We will then be able to give you feedback on this before you make a start on writing a full first draft. This synopsis (around one page) could, for example, include:

- The rationale for the article.
- An introductory paragraph.
- A list of the sections that the article will include, with a brief description of what each will include.
- A short list of key references.
- Any ideas for display items that you have at this stage.

As a tentative deadline for the synopsis, we agreed on early December and I'd be happy to look at any preliminary versions should this be helpful. Could I kindly ask you to confirm this deadline by clicking on the link below? This will open a new screen where you can confirm or propose a new deadline as needed.

When you are ready to submit the outline or first draft, please do so using the following link:

If you have any issues with using our system, please contact our Editorial Assistant at naturephysics@nature.com.

Nature Physics

ORCID

Nature Physics is committed to improving transparency in authorship. As part of our efforts in this direction, we are now requesting that all authors identified as 'corresponding author' on all our published papers create and link their Open Researcher and Contributor Identifier (ORCID) with their account on the Manuscript Tracking System (MTS), prior to acceptance. ORCID helps the scientific community achieve unambiguous attribution of all scholarly contributions. For more information please visit www.springernature.com/orcid.

Before submitting the final version of your piece, please follow the steps below to link your account on our MTS with your ORCID. If you don't have an ORCID yet, you will be able to create one in minutes. If you are not listed as a corresponding author, please ensure that the corresponding author(s) comply.

1. From the homepage (here: https://mts-nphys.nature.com/cgi-bin/main.plex) click on '**Modify my Springer Nature account**' under '**General tasks**'.
2. In the '**Personal profile**' tab, click on '**ORCID Create/link an Open Researcher Contributor ID(ORCID)**'. This will re-direct you to the ORCID website.
3a. If you already have an ORCID account, enter your ORCID email and password and click on '**Authorize**' to link your ORCID with your account on the MTS.
3b. If you don't yet have an ORCID, you can easily create one by providing the required information and then click on '**Authorize**'. This will link your newly created ORCID with your account on the MTS.

IMPORTANT: All authors identified as 'corresponding authors' on the manuscript must follow these instructions. Non-corresponding authors do not have to link their ORCIDs, but please note that it will not be possible to add/modify ORCIDs at proof. Thus, if they wish to have their ORCID added to the paper, they must also follow the above procedure prior to acceptance.

To support ORCID's aims, we only allow a single ORCID identifier to be attached to one account. If you have any issues attaching an ORCID identifier to your Manuscript Tracking System account, please contact the at Platform Support Helpdesk.
